SUMMARY

Penultimate-year medical student building and evaluating AI/ML systems for clinical care. Focused on catching what clinical AI gets wrong — ambiguous lab reads, plausible-looking dosing errors — and designing tools that flag uncertainty instead of guessing with false confidence.

PROJECTS

Clinical Note Eval Generator

Python · Rule-Based Error Injection · Eval Dataset Design

Generates synthetic clinical notes with labeled, injected errors across 6 categories (dosage, allergy conflict, contradictory vitals, drug interaction, unit error, dropped follow-up) for scoring whether a clinical AI system catches what a clinician would.

portfolio-demos-duau.onrender.com/note-eval

Lab-Value-to-Plain-English Explainer

Python · Rule-Based Clinical Reasoning · Confidence Scoring

Rule-based interpreter across 5 common lab tests that separates confidence from verdict, explicitly naming missing context (sex, build, comorbidities) whenever a result is ambiguous.

NaijaTriageAI

Flask · Supabase · Offline-First PWA

Installable, offline-first triage tool for chest pain and maternal/neonatal emergencies, using Bayesian probability models calibrated to Nigerian disease-prevalence data.

github.com/onwunaru760-a11y/triageAI

Sickle Cell Disease NLP Phenotyping Pipeline

Bio+ClinicalBERT · UMAP · HDBSCAN

NLP pipeline over the PMC-Patients corpus extracting structured, clustered SCD phenotypes from unstructured clinical narrative, with GradientBoostingClassifier for downstream classification.

EXPERIENCE

SEO Copywriter & Long-Form Content Strategist — Freelance (Upwork)

Clients across multiple continents, prior to and alongside medical training

100% Job Success · 21 jobs completed. The same discipline — investigate a claim, write it up clearly, back it with evidence — now pointed at clinical AI instead of client briefs.

EDUCATION

Penultimate-year medical student

Clinical rotations in Obstetrics & Gynaecology, Paediatrics

SKILLS

Python · SQL · Django · Flask · Supabase · Prompt Engineering & LLM Evaluation Design · GradientBoostingClassifier · Bio+ClinicalBERT · UMAP · HDBSCAN
